

Seed Potato Catalog

2025

Over 30 Varieties

All Certified Organic

Double-Certified Conventional & Organic Seed Potatoes

Based in Idaho, Grand Teton Organics officially came into being when owner John Hoggan purchased his organic certified land from Parkinson Seed Farm. John has over 50 years of potato growing experience ranging from production, seed selection, plant breeding, seed stock certification and research & development of new varieties. In his career, he has worked with over 300 different potato varieties. For 2025, Country Farm & Home Supply will offer over 30 of Grand Teton Organic's Certified Organic varieties.

When your state's motto is 'The Potato State', you can rest assured that Idaho's Department of Agriculture takes growing potatoes for seed or to eat very seriously. Stringent protocols ensure seed stock is as free of disease as possible and are of the utmost importance in Idaho and to Grand Teton Organics. Lab testing of seed stock, field inspections throughout the growing season and a winter crop of seed potatoes grown in Hawaii all ensure that *your* seed potatoes are the healthiest, most productive seed potatoes available. If any seed potato lots begin to show signs of disease, they are culled and not made available for sale to ensure that overall disease presence in potato production areas (yours or theirs!) stays minimal and manageable.

Grand Teton Organics is committed to providing the highest quality and selection of organic certified seed potatoes available on the market. Both heirloom and new varieties are available every year. New varieties may take up to 15 years to develop and become available for you to grow. Regardless of their origins, potatoes for seed start as tissue cultures from one of many Potato Germplasm Banks where parent stock is housed. Those tissues are sent Idaho State University where they are grown in labs to produce clean plants. These plants are grown in greenhouses to generate mini-tubers that then are sent to farms, like Grand Teton Organics, to be grown out in the field. It is from these mini-tubers that full-sized seed potatoes are produced. Seed potatoes from Grand Teton Organics are no more than two field generations old. Clean seed potatoes ensure a bountiful harvest; seed potatoes accumulate disease from year to year which can negatively impact yield. After two years of production, John rotates old stock out and replenishes it with new mini-tubers to ensure that viruses, bacterial and fungal pests are not accumulating in his soils or seed stock.

After the seasonal harvest, John's seed potatoes are sorted, graded and stored at an optimum 36 degrees. They are shipped to us in mid-February in a climate-controlled truck to maintain seed dormancy. Savy farmers and gardeners know that the quality of the crop you reap is directly related to the quality of the seed you plant. This commitment to excellence in seed production from Idaho is what we here at Country Farm & Home Supply want to offer to you, our valued family and friends.

Growing Great Potatoes:

Soil Preparation, the season before planting: Potatoes prefer soil that has been amended in the Fall with your amendment(s) of choice and/or well-aged compost. Potatoes will remove the following soil nutrients per 1,000 sq. ft. or per acre: (Nitrogen: 2# per 1,000 sq. ft. _ 90-100# per acre) : (Phosphorus: 1# per 1,000 sq. ft. _ 40-50# per acre) : (Potassium: 3.5# per 1,000 sq. ft. _ 150-170# per acre). **Fall additions of Phosphorus and Potassium are recommended; add Nitrogen in the spring.** You may cover crop your beds or leave them fallow. Potatoes DO NOT like to be next to actively decomposing green matter or to be sitting in a puddle of water. Leave time between tillage and planting to allow green matter to break down. Build beds high enough to provide adequate drainage. This can be done the previous fall or allow 2-6 weeks to prepare your soil before you plant.

***GROWER FEEDBACK:** Trace amounts of BORON can improve yields, but use caution! Boron can be toxic if over-applied. ONE POUND PER ACRE is all that's recommended for crops that need Boron.

Green Sprouting: In the southeast, we plant our potatoes in March. Wake up your potatoes in mid-February by green-sprouting them for several weeks. Place whole seed potatoes one or two layers deep in a box; then leave them in a warm_60-85 degrees_ dark place to encourage their eyes to pop. Be careful when handling to avoid breaking off sprouted eyes.

Seed Preparation: Seed potatoes that are 1 ½ - 2 oz. do not need to be cut. Seed over 4 oz. can be cut into smaller pieces; think the size &/or weight of an egg as your goal. Try to have at least 2 eyes per seed piece; one will do if that's all you can find. Avoid cutting eyes if you can. Some folks like to let seed pieces dry for several hours up to a couple days before planting; some folks will cut their seed in the field and plant immediately. It's your call. Once your seed pieces are cut &/or cured after cutting, you're ready to plant.

Bed Preparation, pre-planting: Dig a trench in your bed about 4"-6" deep. Lay seed pieces eyes-up in the trench at 8"-12" for standard potato varieties and 12"-18" for fingerling varieties. You may wish to lay drip tape into the trench next to your seed potatoes to conserve water and to ensure that any water you put out gets to your crop and not your weeds. Cover seed (and drip tape, if used) with several inches of soil and tamp lightly.

Potato Crop Water Needs: Potatoes need different amounts of water at different times in order to produce to the best of their ability. Generally, potatoes need between 1-2 inches of water per week; this could be provided by rain events or you to make up the difference. Water needs for your crop throughout its life goes a little something like this, keeping in mind that this schedule shifts for early, mid and late-producing varieties...

- **Planting to 30 days:** Water needs not high or critical
- **30-60 days:** Water critical for vegetative growth and early tuber formation
- **60-90 days:** Water critical for tuber bulking
- **90-120 days:** Tops begin to yellow and die back. Some water needed but not excessively before harvest

Weeding & Hilling: If you see any potatoes at the soil line, be sure to cover them promptly. Potatoes that are exposed to sunlight will start to photosynthesize and produce a green pigment under the skin that IS TOXIC!! Hilling potatoes ensures that tubers are fully covered and protected from the sun's rays. Some varieties set their tubers high on the hill, so if a variety is noted as such, be sure to make early hilling a priority. Hilling also improves soil drainage around your crop; taters need water but **do not want to sit in a puddle**. Lastly, potatoes form two types of stems; one for above-ground growth, on which we see leaves; one for below-ground growth, on which we find tubers. By covering growing leaf shoots with soil, we are creating more below-ground stem. Once a portion of the stem is buried with soil, it will produce the tuber-forming stems that will then form potatoes. You can hill your potatoes 1-3 times per season/crop. Loosen surrounding soil in the bed and pull up around the leaves and stems. Try to hill before the stems grow too long and start to flop over. You should pull between 2"-6" new soil up around the plants each time you hill. At a certain point, your hills can't get any taller; stop hilling & let the plants do their thing until harvest.

2024-25 Varieties	Pre-Planting Considerations					In-Field Habits		In-Field Habits		Harvest Considerations				Storage
Category	Variety: ALL VARIETIES ARE ORGANIC FOR 2025	Days to Maturity	Skin Color	Flesh Color	Texture	Disease Resistance		Plant Characteristics & Pest Resistance	Yield	Shape	Average Size	If you PLANT March 1st; You can HARVEST 1st, 2nd, 3rd, 4th week of month	Storage Properties: <i>Best in cold storage</i>	
Early, 55-80														
	Dark Red Norland	55-75	Red	White	Moist, Firm	Scab, Verticillium Wilt		Medium-sized plant	High	Oblong	Large-Medium	May 1, 2, 3	Fair; best fresh	
	Purple Viking	65-80	Purple & Pink	White	Moist, Mid-dry	Moderate Scab, heat tolerant		Vining, Medium-sized 18"	Great! Some of all sizes	Round	Various	May 1, 2, 3	Sweetens in storage	
	Grand Duke	80	Yellow	Yellow	Firm, Waxy	Resistant to virus & some nematodes; susceptible to scab		Short vines with trailing habit	Up to 8 per hill	Round - Oval	Med-Lg, Uniform	May 2, 3	Short dormancy; use within 2 months	
Mid, 70-90														
	Desiree	70-90	Red	Yellow	Waxy, Firm, Moist	Good overall; drought tolerant		Med-Lg; semi-erect vines	Good; uniform tubers	Oval	Uniform	May 2, 3	2-3 months	
	Huckleberry Gold	70-90	Purple	Yellow	Creamy, Buttery	Scab, Verticillium Wilt, Virus		Medium, Erect	Good; 5-7 per hill	Round-Oval	Uniform	May 2, 3	Good	
	Blackberry	80-90	Dark Purple	Purple	Firm, Moist	Good resistance to many		Medium sized & semi-erect	Up to 10 per hill	Oblong - Round	Medium-Large	May 3, 4	Fair; best fresh	
	Cal White	80-90	Buff	White	Dry, Floury	Fusarium & Scab		Med-Lg Vines, spreading	Medium-High	Oblong	Med-Lg, Uniform	May 3, 4	Moderate, 2-3 mo.	
	Chieftain	80-90	Pinkish Red	White	Moist, Firm	Resistant to many diseases		Large vines	Great; 10 per hill	Round-Oblong	Large, Uniform	May 3, 4	Good	
	Ciklamen	80-90	Red	White	Firm, Waxy	Excellent; virus, scab, & more		Medium-sized plants	10-20 per hill; great for roasters	Short Oval	Tennis ball sized	May 3, 4	Very Good, long dormancy	
	Red Pontiac	80-90	Deep Red	White	Waxy, Moist	Moderate; Drought tolerant		Tall, up-right plant	Good	Round-Oval	Various Sm & Lg	May 2, 3	Moderate; 3-4 mo.	
	Russet Norkotah 278	80-90	Tan/Brown	White	Dry, Floury	Heat tolerant		Med- Lg Vines	High yields	Oblong	Large, Uniform	May 3, 4	Moderate, 2-3 mo.	
	Russet Norkotah PHP	80-90	Tan/Brown	White	Dry, Floury	Good Scab Resistance		Med- Lg Vines	Great	Oblong	Large, Uniform	May 3, 4	Good	
New for 2025!	Yukon Baby	85-90	Gold	Gold	Waxy, Firm	Wide variety of resistances		Tall, medium-sized plants	Excellet; up to 20 per plant!	Oval	Small-Medium	May 3, 4	Excellent	
	Yukon Gold	80-90	Gold	Gold	Waxy, Firm	Moderate Scab Resistance		Tall, medium-sized plants	Moderate; 5-7 per hill	Oval	Med-Lg, Uniform	May 3, 4	Excellent	
	Purple Majesty	90	Purple/Blue	Purple	Firm, Mid-dry	Low-Med viral & bacterial res.		Good for New Potatoes	8 per hill; Thin Skinned	Oblong-Oval	Uniform Size	June 1, 2	Good	
Late, 90-110														
	Gold Nugget	90-100	Deep Gold	Bright Yellow	Waxy, Moist				Up to 12 per hill	Round-Oval	Medium, Uniform	June 1, 2, 3	Good-Great	
	Green Mountain	90-100	Buff	White	Dry, Floury	Fusarium, Verticillium, Black Leg		Large spreading plants	6-10 per hill	Flattened, Oblong	Medium	June 1, 2, 3	Very Good, long dormancy	
New for 2025!	Lamoka	90	White	White	Firm, Moist	Scab & some nematodes		Large, Plant at 8"-9" spacing	6-10 per hill	Round	Medium, Uniform	June 1, 2, 3	Very Good, long dormancy	
New for 2025!	Masquerade	90-100	Red & Gold	Yellow	Firm, Moist			Medium-tall vines	8-12 per hill	Flattened, Oval	Small- Medium	June 1, 2, 3	Good	
	Raspberry	90-100	Burgundy	Raspberry	Waxy, Moist			Small-Medium sized plants	6-8 per hill	Oblong, Round	Medium, Uniform	June 1, 2, 3	Good @ 36-38	
	Terra Rosa	90-100	Majenta	Dark Pink	Mid-dry, Firm			Large plants	Good	Oblong	Up to 10 oz. each	June 1, 2, 3	Fair; short dormancy	
	Wild Purple	90-100	Purple OR Purple/Gold	Purple OR Purple/Gold	Firm, Moist	Good resistance to many		Large, sprawling, semi-erect vines	Good - High	Round-Oval	2-5 oz	June 1, 2, 3	Good	
	All Blue	100-110	Blue/Purple	Blue	Moist, Mid-Dry	Good Scab & Late Blight Resistance		Med-Lg tall, upright plants	Good; many per plant	Long	Small- Medium	June 3, 4	Good	
	German Butterball	100-110	Gold Netted	Yellow	Medium-dry	Good Scab Resistance			Good; 12 per hill	Oblong-Round	Medium	June 3, 4	Excellent	
	Russet Burbank	100-110	Brown Russeted	White	Dry, Floury	Good resistance to many		Large plants; allow 16" spacing	Good-High as tubers bulk	Oblong	Med- Very Large	June 3,4	Good-Great in cold storage	
Fingerlings														
Back for 2025!	Red Thumb	65-75	Red	Pink	Waxy, Firm	Moderate Scab Resistance		Large: allow 16" - 18" spacing	Good; needs extra fertility	Long, Stout	Small-Medium	May 1, 2, 3	Good	
	Amarosa	110 plus	Red	Red	Waxy, Firm	High Scab Resistance		Large; allow 16" - 18" spacing	Great; up to 30 per hill	Long, Slender	Small-Medium	July	Fair-Good; thin skins	
	Austrian Crescent	110 plus	Gold-Tan	Yellow	Waxy, Firm	Good Scab Resistance		Large; allow 16" - 18" spacing	Great; up to 30 per hill	Long, Slender	3-10 oz tubers	July	Good	
	Banana	110 plus	Buff Gold	Yellow	Waxy, Mid-Dry	Good Scab Resistance		Large: allow 16" - 18" spacing	Great; up to 40 per hill	Long, Slender	2"-3" long tubers	July	Good	
	French	110 plus	Dark Rose Red	Yellow w/ Pink Streaks	Waxy, Firm	High Scab Resistance		Large: allow 16" - 18" spacing	Up to 40 per hill	Oblong, Stout	Medium	July	Good	
	La Ratte	110 plus	Buff Gold	Yellow	Waxy, Firm; Nutty	Good Scab & Virus Resistance		Large; allow 16" - 18" spacing	Averages 10-20 per hill	Long, Slender	2" - 3" long	July	Good	
New for 2025!	Purple Violet	110 plus	Violet	Light Purple	Waxy, Firm			Large: allow 16" - 18" spacing	Averages 6-12 per hill	Long, Stout	3" - 5" long	July	Very good	

Early Season Potatoes _55-80 days

Dark Red Norland		Organic	EARLY
	Days To Maturity:	55-75 Days	<p>Dark Red Norland is one of the earliest reds you'll find. Expect small-large tubers on medium-sized plants. Good disease resistance to Scab, Hollow Heart, Early Blight, Black Scurf and crack-resistant. Eat within 2-3 months of harvest.</p> <p>Grower Feedback: Mark your calendar and DIG ON TIME. If left in the ground longer than 80 days, expect tubers to become over-sized & decline in quality.</p>
	Skin Color:	Red	
	Flesh Color:	White	
	Flesh Texture:	Moist, Firm	

Purple Viking		Organic	EARLY
	Days To Maturity:	65-80 Days	<p>As freshly dug new potatoes, these are a show-stopper on the market table when washed. Purple Viking's flavor sweetens in storage.</p> <p>Grower Feedback: Dig early for best quality tubers. Skins are fragile and easily slip off if you're not careful. Early harvesting yields smaller tubers; if left in longer, Purple Vikings can tip the scales at up to a pound per tater!</p>
	Skin Color:	Purple with Pink Streaks	
	Flesh Color:	White	
	Flesh Texture:	Waxy, Moist	

Grand Duke		Organic	MID
	Days To Maturity:	80 Days	<p>Grand Duke is an excellent, versatile table variety that is adaptable in the field. The Duke will yield a bounty of up to 8 smooth skinned tubers in just 80 days. For harvest, mark your calendar to see how they're bulking up so you can control the tuber size. Plan on using within 3 months of harvest as dormancy is short with this variety. Use in any recipe calling for firm, waxy potatoes like chips, fries, au gratins, casseroles & hash.</p>
	Skin Color:	Gold	
	Flesh Color:	Gold	
	Flesh Texture:	Firm, Waxy	

Mid Season Potatoes _ 70-90 days

Desiree		Organic	MID
	Days To Maturity:	70-90 Days	Developed in the 1960's, this European variety is prized for earliness, high yield, versatility in the kitchen and exceptional flavor. In the southeast, Desiree's tolerance of heat and earliness makes it an asset to any grower. Appearance and flavor is similar to French Fingerlings but these will be out of the ground about a month or two sooner. Desiree stores well.
	Skin Color:	Red	
	Flesh Color:	Gold	
	Flesh Texture:	Waxy, Moist, Firm	

Huckleberry Gold		Organic	MID
	Days To Maturity:	70-90 Days	This one has won a seat at the tater council of unbeatable varieties. Harvest early for baby potatoes or later for larger spuds. Large, sturdy plants can tolerate some stress and produce 5-7 uniform tubers per hill. Tubers have a naturally low glycemic index & are high in antioxidants. Grower Feedback: Huckleberry Gold's buttery flavor is outstanding! Harvest early for best tuber quality. Yields are not as high as some varieties but is well worth the space once you have a taste!
	Skin Color:	Purple	
	Flesh Color:	Gold	
	Flesh Texture:	Buttery, Creamy, Firm	

Blackberry		Organic	MID
	Days To Maturity:	80-90 Days	Light up your market table with this eye-catcher. Smooth skin with shallow eyes cover vibrant violet flesh. With proper fertility and water, Blackberry can yield up to 10 tubers per hill. Yield potential is slightly higher than Purple Majesty and is earlier to harvest than All Blue. Skins are thin upon harvest; use care while harvesting and do not wash until you're ready to use them.
	Skin Color:	Deep Blue Purple	
	Flesh Color:	Violet	
	Flesh Texture:	Firm, Moist	

Mid Season Potatoes _ 70-90 days

Cal White		Organic	MID
	Days To Maturity:	80-90 Days	<p>Cal White is our organic substitute for Kennebec. It will set an excellent yield of medium sized tubers faster than Kennebec. It's versatile in the kitchen for baking, boiling, dehydrating, mashing, salads, soups, etc.</p> <p>Grower Feedback: Grand Teton Organics has made the switch from Kennebec to Cal White which is faster to mature & just as prolific Kennebec while sharing the same culinary niche.</p>
	Skin Color:	Buff	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

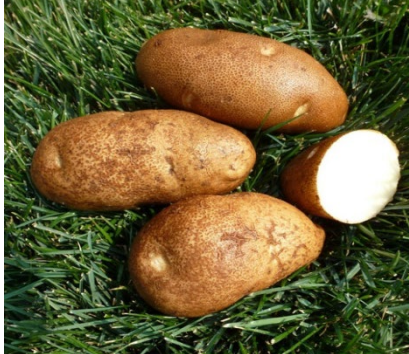

Chieftain		Organic	MID
	Days To Maturity:	80-90 Days	<p>The eye-catching magenta skin will be the first thing you notice about this variety. Chieftain delivers a hearty set of uniform, round tubers on large plants. Chieftain is resistant to Scab, Tuber Net Necrosis and Late Blight. Once tubers are out of the ground, eating quality is versatile and tasty with good storage properties.</p> <p>Grower Feedback: Chieftain does NOT like excessively wet, cold soils. Good bed prep with attention to drainage is very important with this variety.</p>
	Skin Color:	Pinkish Red	
	Flesh Color:	White	
	Flesh Texture:	Moist, Firm	

Ciklamen		Organic	MID
	Days To Maturity:	80-90 Days	<p>Ciklamen works as both an early baby roaster or a regular mid-season storage variety. Expect excellent disease and viral resistance and a high tuber set from this European breed variety. Ciklamen tolerates mechanical handling better than some varieties. Storage and tuber dormancy is good at room temperature and even better in the cooler. Roast, boil or bake Ciklamen solo or as a mix.</p>
	Skin Color:	Red	
	Flesh Color:	White	
	Flesh Texture:	Firm, Waxy	

Mid Season Potatoes _ 70-90 days

Red Pontiac		Organic	MID
	Days To Maturity:	80-85 Days	<p>Red Pontiac is a tried and true producer in a wide variety of growing conditions. Plants are sturdy, tall and up-right, making hilling a bit easier.</p> <p>Grower Feedback: Great yields! Tubers come off large and uniform. Many growers put Red Pontiac on their list of favored, reliable 'go-to' varieties.</p>
	Skin Color:	Red	
	Flesh Color:	White	
	Flesh Texture:	Waxy, Moist	

Russet Norkotah 278		Organic	MID
	Days To Maturity:	80-90 Days	<p>278 is one of Grand Teton Organic's selections out of Russet Norkotah stock. This variety will produce heavy yields of large tubers in a short amount of time. Large plants are more heat tolerant than other russets on the market. 278 stores moderately well; plan to use within 3 months of harvest.</p> <p>Grower Feedback: Local growers appreciate how fast this russet matures so they can be out of the ground before they start cooking where they grow!</p>
	Skin Color:	Tan, Netted	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Russet Norkotah PHP		Organic	MID
	Days To Maturity:	80-90 Days	<p>A Grand Teton Organics' selection out of Russet Norkotah stock, this selection is the heaviest yielder of large tubers in a short amount of time. Good resistance to Scab. The PHP is part of the variety name to distinguish it from other Russet Norkotah selections; it does not indicate specific disease resistance.</p> <p>Grower Feedback: Overall, a good performer with uniform, large tubers upon harvest. Delicious!</p>
	Skin Color:	Tan, Netted	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Mid Season Potatoes _ 70-90 days

Yukon Baby		Organic	MID
	Days To Maturity:	85-90 Days	NEW FOR 2025! We can't wait to try this one... Yukon Baby produces 3 times as many tubers per plant as Yukon Gold and they stay golf ball to tennis ball sized. All the potatoes pictured to the left were harvested from the same plant! If you want tiny taters, this is your baby. <i>Substitute this variety for Baby Lou which is unfortunately not available for 2025.</i>
	Skin Color:	Gold	
	Flesh Color:	Gold	
	Flesh Texture:	Waxy, Firm	

Yukon Gold		Organic	MID
	Days To Maturity:	80-90 Days	This tried and true variety consistently performs well in the southeast. Yukon Gold will set approximately 5-7 tubers on medium-sized tall plants. Grower Feedback: This really is a 'go-to' variety for its dependability. It is important to get them out on time. Tubers will begin to deteriorate and rot if left too long. Mark your calendar at planting and start checking your crop at 80 days so you can get them out of the ground before it gets too hot!
	Skin Color:	Gold	
	Flesh Color:	Gold	
	Flesh Texture:	Waxy, Firm	

Purple Majesty		Organic	MID
	Days To Maturity:	90 Days	Purple Majesty can set 8 tubers per plant and are great for early new potatoes or full-sized tubers later in the season. Additionally, purple potatoes contain Anthocyanidins which help to reduce cholesterol, improve immune function and reduce the risk of cancer and heart disease. Grower Feedback: Use care when harvesting; skins are tender and will easily slip off if handled roughly. Kid gloves and egg hands, please.
	Skin Color:	Purple/Blue	
	Flesh Color:	Purple	
	Flesh Texture:	Firm, Mid-Dry	

Late Season Potatoes _ 90-110 days

Gold Nugget		Organic	LATE
	Days To Maturity:	90-100 Days	Gold nugget is versatile, prolific and a good keeper. It produces up to 12 uniform tubers per plant. Harvest early for baby potatoes or leave in longer for a crop of medium sized storage tubers. Gold Nugget cooks evenly and its flavor is buttery. On the market table, the skin is very smooth and eyes are shallow making for a lovely display.
	Skin Color:	Deep Gold	
	Flesh Color:	Bright Yellow	
	Flesh Texture:	Waxy, Moist	

Green Mountain		Organic	LATE
	Days To Maturity:	90-100 Days	This heirloom variety from the 1800's was breed in Vermont. Still a favorite for its all-purpose tubers and earthy flavor, Green Mountain is dry, mealy and great baked, boiled or mashed. Large spreading plants produce a healthy set in both number and size of tubers. This variety has good resistance to fusarium & verticillium wilt; lower tolerance to virus and scab. Plant in acidic soil to curb instances of scab. Expect good storage.
	Skin Color:	Buff	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Lamoka		Organic	LATE
	Days To Maturity:	90 Days	NEW VARIETY FOR 2025! Lamoka came into being in 1998 and is named for one of the twin lakes in NY state. Planting at 8'-9" spacing is recommended so tubers do not become over-sized. Used primarily as a chipping and an all-purpose variety, Lamoka produces an excellent crop of smooth skinned, perfectly white tubers that hold a beautiful golden color when fried. Lamoka has a long dormancy period and will keep well, especially if in cold storage.
	Skin Color:	White	
	Flesh Color:	White	
	Flesh Texture:	Firm, Moist	

Late Season Potatoes_ 90-110 days

Masquerade		Organic	LATE
	Days To Maturity:	90-100 Days	NEW VARIETY FOR 2025! Thank Colorado State for breeding this bicolored variety. Medium sized plants produce a good set of 8-12 tubers per hill. Add some extra color to your market and dinner table while also adding an extra dose of nutrition as Masquerade is naturally high in anthocyanins. Enjoy their buttery flavor baked, boiled, fried or roasted.
	Skin Color:	Red & Gold	
	Flesh Color:	Yellow	
	Flesh Texture:	Firm, Moist	

Raspberry			LATE
	Days To Maturity:	90-100 Days	Raspberry is still relatively new and one of our few red skin, red fleshed options. Expect this variety to yield 6-8 tubers on small-medium sized plants. Its color is vibrant and eye-catching for market displays. Smooth skin, shallow eyes and vivid flesh color make it stand out roasted or in potato salad. Raspberry keeps well in storage.
	Skin Color:	Burgundy	
	Flesh Color:	Raspberry	
	Flesh Texture:	Waxy, Moist	

Terra Rosa		Organic	LATE
	Days To Maturity:	90-100 Days	Terra Rosa will produce a hearty yield of appealing oblong tubers that can reach up to 10 oz. Smooth skin, shallow eyes and exceptional eye-catching color make this variety an asset on the market table. Terra Rosa's rich color reflects its high levels of immune system-boosting antioxidants and carotenoids. Grower Feedback: Terra Rosa performed well for growers in NC with several accounts of 1:16 yields.
	Skin Color:	Magenta	
	Flesh Color:	Dark Pink	
	Flesh Texture:	Mid-Dry, Firm	

Late Season Potatoes _ 90-110 days

Wild Purple		Organic	LATE
	Days To Maturity:	90-100 Days	Aptly named, wild purple resembles some of the wild varieties found in the South American Andes. The vines can get up to 30", are semi-upright and narrower than other cultivated varieties. Plants produce 2 different kinds of tubers on the same plant: purple skin with purple flesh and mottled purple & gold skin with streaked gold and purple flesh. So, are you feeling wild?...
	Skin Color:	Purple OR Purple & Gold	
	Flesh Color:	Purple OR Purple & Gold	
	Flesh Texture:	Firm, Moist	

All Blue		Organic	LATE
	Days To Maturity:	100-110 Days	All Blue has delighted eaters everywhere for over 100 years. This variety takes the full season to make large tubers; you can take them earlier as new potatoes if you just can't wait. High in antioxidants. Grower Feedback: Due to All Blue being a late-maturing variety, performance will be highly season & site-specific. Ensure adequate watering if summer heats us and dries out to stress related physiological conditions like hollow heart.
	Skin Color:	Blue/Purple	
	Flesh Color:	Blue	
	Flesh Texture:	Soft, Moist	

German Butterball		Organic	LATE
	Days To Maturity:	100-110 Days	Tater enthusiasts everywhere agree that you can't find a better all-around potato than German Butterball. German Butterball requires a long season produce a good set of up to 12 tubers per plant on large, upright plants. A good keeper, Butterball will last for months in storage. Grower Feedback: Overwhelmingly, growers LOVE this variety. Many reported yields of over 1:10, some reached 1:14! Quote: "German Butterball is the BEST TASTING fried tater EVER!"
	Skin Color:	Gold, Netted	
	Flesh Color:	Yellow	
	Flesh Texture:	Medium-Dry	

Late Season Potatoes & Fingerlings

Russet Burbank		Organic	LATE
	Days To Maturity:	100-110 Days	<p>America's favorite potato pound for pound is the Russet Burbank. Grown since the late 1800's, this variety will produce a hearty set of large tubers on large, upright plants. Give them at least 16" between seed pieces for best performance.</p> <p>Grower Feedback: Burbank requires a long season. Ensure adequate fertility and water so plants yield their best.</p>
	Skin Color:	Russet	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Red Thumb Fingerling		Organic	LATE
	Days To Maturity:	110+ Days	<p>BACK FOR 2025!</p> <p>Red Thumb took a break for 2024 and is back for 2025! As one of the fastest fingerlings on the market, you can be the first to the table with these tasty treats before the late season varieties have even started bulking up. For best performance, give Red Thumb extra fertility, regular water and start checking plants early. Red Thumb produces a large yield of tubers averaging 4" long on medium sized plants.</p>
	Skin Color:	Red	
	Flesh Color:	Pink & Gold streaked	
	Flesh Texture:	Waxy, Firm	

Amarosa Fingerling		Organic	LATE
	Days To Maturity:	110+ Days	<p>As one of the few red-skinned, red-fleshed fingerlings on the market, Amarosa is an eye catcher on the market table. Production potential for up to 30 tubers per hill is possible if fertility and water requirements are met. Upon cooking, Amarosa will hold its color for one of the prettiest, most nutrient-dense potatoes you can find!</p>
	Skin Color:	Red	
	Flesh Color:	Reddish Pink	
	Flesh Texture:	Waxy, Smooth	

Fingerlings

Austrian Crescent Fingerling		Organic	LATE
	Days To Maturity:	110+ Days	Austrian Crescent tends to set a prolific number of crescent shaped 3-7 oz tubers that can reach up to 10" long. Plants will get large and tend to sprawl, so hill early several times then let the vines go where they may. Tubers are great for roasting, salads or steaming and they'll keep well in storage for your favorite fall recipes after the heat of summer has past.
	Skin Color:	Gold-Tan	
	Flesh Color:	Yellow	
	Flesh Texture:	Waxy, Firm	

Banana Fingerling		Organic	LATE
	Days To Maturity:	110+ Days	Banana fingerlings are another stellar producer of up to 40 tubers per hill if given proper space, fertility, water and time. Space fingerlings at a minimum of 12"-16" apart. Banana fingerlings will be 2"-3" in length on medium-large sized plants. Start checking early because some may be ready to harvest at 80-90 days.
	Skin Color:	Gold	
	Flesh Color:	Yellow	
	Flesh Texture:	Waxy, Mid-Dry	

French Fingerling		Organic	LATE
	Days To Maturity:	110+ Days	French Fingerling is outstanding in just about every way. With the potential to set up to 40 tubers per hill and tuber size more in line with standard potato varieties, French Fingerling will meet and exceed your expectations if you can provide them with adequate fertility, water and enough time in the ground to work their magic. Set seed pieces at least 16" apart, hill several times early and then let the vines go wild.
	Skin Color:	Dark Rose Red	
	Flesh Color:	Yellow with Pink Streaks	
	Flesh Texture:	Waxy, Firm	

Fingerlings

La Ratte Fingerling		LATE
	Days To Maturity:	110+ Days
	Skin Color:	Buff Gold
	Flesh Color:	Yellow
	Flesh Texture:	Waxy, Firm
		This French variety is prized for its prolific set of exceptionally flavored tubers. Some find them to have a nutty flavor similar to chestnuts or hazelnuts. Medium sized plants are resistant to scab and viruses. Check plants at 90 days as they may be ready to harvest sooner. La Ratte stores well into the colder months for all of your favorite fall and winter recipes.

Purple Violet Fingerling		LATE
	Days To Maturity:	110+ Days
	Skin Color:	Violet
	Flesh Color:	Light Purple
	Flesh Texture:	Waxy, Firm
		NEW FOR 2025! Getting a new variety into the supply chain for growers may take up to 3 years from initial request to taters-in-hand and this is no exception. Give this one plenty of space as plants are quite large. Tuber set is more like a standard variety with 6-12 tubers per plant. Expect to leave them in the ground for up to 120 days to get all of your yield from this variety. Storage quality is high with this variety.

The man behind the tater...Thanks to John Hoggan!
Owner & Grower of Grand Teton Organics, Idaho

Potatoes arrive in February. We will send out a mass email & a newsletter with an exact potato arrival date as we approach Valentines Day. We require a \$50.00 deposit per 250 pounds ordered. No deposit is required for orders under 250#. Remaining balance is due upon pick-up or delivery of your order.

If you order less than 50# PER VARIETY & your order requires us to break 50# bags, you are in the first price tier.

E-mail, Call or Mail your order to us by Monday January 13th, 2025. Deposits can be made in person at the store, by mailing us a check or by calling us with a credit card. Please wait until you receive your emailed order confirmation to make your deposit.

Seasonal Planning & Seed Calculations

What are your priorities for your 2025 Potato Crop?

Use the **Variety Guide** located in the centerfold page to help you figure out which varieties will meet your needs. Each column in the Variety Guide addresses a different priority; what's most important to you?

Planting Calculations

*How many **pounds** of seed do you need?*

		Row Length		
	Seed Spacing	25'	50'	100'
Standard Potatoes	8"	5#	10#	20#
	10"	4#	8#	15#
	12"	3#	6#	12#
Fingerlings	12"	3#	6#	12#
	16"	2.5#	5#	10#
	18"	2#	4#	8#

Assumptions: 1 Row to the Bed

Seed piece weight = **2 ounce minimum**

Generalities: Seed potato size varies greatly between varieties
Fingerling seed pieces may be under 2 ounces

Tater Tendancies:

Closer spacing = smaller taters
(for roasters & early market sales)

Wider spacing = larger taters
(for storage & mid-late season market sales)

NOTES: Crunch those numbers!

Ordering Seed Potatoes from

ORDERING:

We will accept orders from **Monday, November 4th 2024 to Monday, January 13th, 2025.**

We require a \$25.00 deposit per 50 pounds of potatoes ordered.

No deposit is required for orders of less than 50 pounds total.

The ORDER FORM is in a separate PDF file, located on the Seed Potato Page of our website; please use the Order Form for pricing and additional details.

You can place your order in any of these ways:

- E-mail us! info@chathamfarmsupply.com
- Call us! (919) 542-3353
- Fax us! (919) 542-6717
- Mail it to...

**Country Farm & Home Supply
203 S. Small Street
Pittsboro NC 27312**

Arrival of Seed Potatoes:

We will schedule the delivery of all seed potatoes around Valentine's Day of February 2025. We will communicate the exact delivery date via our NEWSLETTER and E-MAIL. We will let everyone know when they are here, sorted and ready for pick-up via E-MAIL. Stay tuned for up to the minute details as weather can be inclement in February.

Pick-Up & Delivery Options:

Once we announce that everything is here, come on down!!

Our store hours are: Monday-Friday, 8 – 5:30 pm and Saturdays 8 – 3 pm.
We will be running multiple delivery routes immediately after our seed potatoes arrive. Check out our website for more details about our farm delivery service or to complete our survey about adding delivery services to your area.
