

# Seed Potato Catalog

## 2024

**Over 30 Varieties**

**Certified Organic**

## *Double-Certified Conventional & Organic Seed Potatoes*

Based in Idaho, Grand Teton Organics officially came into being when owner John Hoggan purchased his organic certified land from Parkinson Seed Farm. John has over 50 years of potato growing experience ranging from production, seed selection, plant breeding, seed stock certification and research & development of new varieties. In his career, he has worked with over 300 different potato varieties. For 2024, Country Farm & Home Supply will offer over 30 of Grand Teton Organic's Certified Organic varieties.

When your state's motto is 'The Potato State', you can rest assured that Idaho's Department of Agriculture takes growing potatoes for seed or to eat very seriously. Stringent protocols ensure seed stock is as free of disease as possible and are of the utmost importance in Idaho and to Grand Teton Organics. Lab testing of seed stock, field inspections throughout the growing season and a winter crop of seed potatoes grown in Hawaii all ensure that *your* seed potatoes are the healthiest, most productive seed potatoes available. If any seed potato lots begin to show signs of disease, they are culled and not made available for sale to ensure that overall disease presence in potato production areas (yours or theirs!) stays minimal and manageable.

Grand Teton Organics is committed to providing the highest quality and selection of organic certified seed potatoes available on the market. Both heirloom and new varieties are available every year. New varieties may take up to 15 years to develop and become available for you to grow. Regardless of their origins, potatoes for seed start as tissue cultures from one of many Potato Germplasm Banks where parent stock is housed. Those tissues are sent Idaho State University where they are grown in labs to produce clean plants. These plants are grown in greenhouses to generate mini-tubers that then are sent to farms, like Grand Teton Organics, to be grown out in the field. It is from these mini-tubers that full-sized seed potatoes are produced. Seed potatoes from Grand Teton Organics are no more than two field generations old. Clean seed potatoes ensure a bountiful harvest; seed potatoes accumulate disease from year to year which can negatively impact yield. After two years of production, John rotates old stock out and replenishes it with new mini-tubers to ensure that viruses, bacterial and fungal pests are not accumulating in his soils or seed stock.

After the seasonal harvest, John's seed potatoes are sorted, graded and stored at an optimum 36 degrees. They are shipped to us in mid-February in a climate-controlled truck to maintain seed dormancy. Savy farmers and gardeners know that the quality of the crop you reap is directly related to the quality of the seed you plant. This commitment to excellence in seed production from Idaho is what we here at Country Farm & Home Supply want to offer to you, our valued family and friends.

## *Growing Great Potatoes:*

**Soil Preparation, the season before planting:** Potatoes prefer soil that has been amended in the Fall with your amendment(s) of choice and/or well-aged compost. Potatoes will remove the following soil nutrients per 1,000 sq. ft. or per acre: (Nitrogen: 2# per 1,000 sq. ft. \_ 90-100# per acre) : (Phosphorus: 1# per 1,000 sq. ft. \_ 40-50# per acre) : (Potassium: 3.5# per 1,000 sq. ft. \_ 150-170# per acre). **Fall additions of Phosphorus and Potassium are recommended; add Nitrogen in the spring.** You may cover crop your beds or leave them fallow. Potatoes DO NOT like to be next to actively decomposing green matter or to be sitting in a puddle of water. Leave time between tillage and planting to allow green matter to break down. Build beds high enough to provide adequate drainage. This can be done the previous fall or allow 2-6 weeks to prepare your soil before you plant.

**\*GROWER FEEDBACK:** Trace amounts of BORON can improve yields, but use caution! Boron can be toxic if over-applied. ONE POUND PER ACRE is all that's recommended for crops that need Boron.

**Green Sprouting:** In the southeast, we plant our potatoes in March. Wake up your potatoes in mid-February by green-sprouting them for several weeks. Place whole seed potatoes one or two layers deep in a box; then leave them in a warm\_60-85 degrees\_ dark place to encourage their eyes to pop. Be careful when handling to avoid breaking off sprouted eyes.

**Seed Preparation:** Seed potatoes that are 1 ½ - 2 oz. do not need to be cut. Seed over 4 oz. can be cut into smaller pieces; think the size &/or weight of an egg as your goal. Try to have at least 2 eyes per seed piece; one will do if that's all you can find. Avoid cutting eyes if you can. Some folks like to let seed pieces dry for several hours up to a couple days before planting; some folks will cut their seed in the field and plant immediately. It's your call. Once your seed pieces are cut &/or cured after cutting, you're ready to plant.

**Bed Preparation, pre-planting:** Dig a trench in your bed about 4"-6" deep. Lay seed pieces eyes-up in the trench at 8"-12" for standard potato varieties and 12"-18" for fingerling varieties. You may wish to lay drip tape into the trench next to your seed potatoes to conserve water and to ensure that any water you put out gets to your crop and not your weeds. Cover seed (and drip tape, if used) with several inches of soil and tamp lightly.

**Potato Crop Water Needs:** Potatoes need different amounts of water at different times in order to produce to the best of their ability. Generally, potatoes need between 1-2 inches of water per week; this could be provided by rain events or you to make up the difference. Water needs for your crop throughout its life goes a little something like this, keeping in mind that this schedule shifts for early, mid and late-producing varieties...

- **Planting to 30 days:** Water needs not high or critical
- **30-60 days:** Water critical for vegetative growth and early tuber formation
- **60-90 days:** Water critical for tuber bulking
- **90-120 days:** Tops begin to yellow and die back. Some water needed but not excessively before harvest

**Weeding & Hilling:** If you see any potatoes at the soil line, be sure to cover them promptly. Potatoes that are exposed to sunlight will start to photosynthesize and produce a green pigment under the skin that IS TOXIC!! Hilling potatoes ensures that tubers are fully covered and protected from the sun's rays. Some varieties set their tubers high on the hill, so if a variety is noted as such, be sure to make early hilling a priority. Hilling also improves soil drainage around your crop; taters need water but **do not want to sit in a puddle**. Lastly, potatoes form two types of stems; one for above-ground growth, on which we see leaves; one for below-ground growth, on which we find tubers. By covering growing leaf shoots with soil, we are creating more below-ground stem. Once a portion of the stem is buried with soil, it will produce the tuber-forming stems that will then form potatoes. You can hill your potatoes 1-3 times per season/crop. Loosen surrounding soil in the bed and pull up around the leaves and stems. Try to hill before the stems grow too long and start to flop over. You should pull between 2"-6" new soil up around the plants each time you hill. At a certain point, your hills can't get any taller; stop hilling & let the plants do their thing until harvest.

## *Early Season Potatoes \_55-80 days*

Dark Red Norland		Organic	<b>EARLY</b>
	<b>Days To Maturity:</b>	55-75 Days	<p>Dark Red Norland is one of the earliest reds you'll find. Expect small-large tubers on medium-sized plants. Good disease resistance to Scab, Hollow Heart, Early Blight, Black Scurf and crack-resistant. Eat within 2-3 months of harvest.</p> <p><b>Grower Feedback:</b> Mark your calendar and DIG ON TIME. If left in the ground longer than 80 days, expect tubers to become over-sized &amp; decline in quality.</p>
	<b>Skin Color:</b>	Red	
	<b>Flesh Color:</b>	White	
	<b>Flesh Texture:</b>	Moist, Firm	

Purple Viking		Organic	<b>EARLY</b>
	<b>Days To Maturity:</b>	65-80 Days	<p>As freshly dug new potatoes, these are a show-stopper on the market table when washed. Purple Viking's flavor sweetens in storage.</p> <p><b>Grower Feedback:</b> Dig early for best quality tubers. Skins are fragile and easily slip off if you're not careful. Early harvesting yields smaller tubers; if left in longer, Purple Vikings can grow up to a pound per tater!</p>
	<b>Skin Color:</b>	Purple with Pink Streaks	
	<b>Flesh Color:</b>	White	
	<b>Flesh Texture:</b>	Waxy, Moist	

Agata		Organic	<b>EARLY</b>
	<b>Days To Maturity:</b>	80 Days	<p>Agata is a popular European table variety prized for great performance in the field, versatility in the kitchen and excellent flavor. Expect up to 8 tubers per hill in just 80 days. Plan on eating this crop within 2-3 months or so because tubers have short dormancy and will start to sprout. Use Agata in recipes calling for firm, waxy potatoes like chips, fries, au gratins, casseroles and hashes.</p>
	<b>Skin Color:</b>	Yellow	
	<b>Flesh Color:</b>	Yellow	
	<b>Flesh Texture:</b>	Firm, Waxy	

## Mid Season Potatoes \_ 70-90 days

Desiree		Organic	MID
	Days To Maturity:	70-90 Days	Developed in the 1960's, this European variety is prized for earliness, high yield, versatility in the kitchen and exceptional flavor. In the southeast, Desiree's tolerance of heat and earliness makes it an asset to any grower. Appearance and flavor is similar to French Fingerlings but these will be out of the ground about a month or two sooner. Desiree stores well.
	Skin Color:	Red	
	Flesh Color:	Gold	
	Flesh Texture:	Waxy, Moist, Firm	

Huckleberry Gold		Organic	MID
	Days To Maturity:	70-90 Days	This one has won a seat at the tater council of unbeatable varieties. Harvest early for baby potatoes or later for larger spuds. Large, sturdy plants can tolerate some stress and produce 5-7 uniform tubers per hill. Tubers have a naturally low glycemic index & are high in antioxidants. <b>Grower Feedback:</b> Huckleberry Gold's buttery flavor is outstanding! Harvest early for best tuber quality. Yields are not as high as some varieties but is well worth the space once you have a taste!
	Skin Color:	Purple	
	Flesh Color:	Gold	
	Flesh Texture:	Buttery, Creamy, Firm	

Blackberry		Organic	MID
	Days To Maturity:	80-90 Days	<b>LIMITED SUPPLY; ORDER EARLY!</b> Light up your market table with this eye-catcher. Smooth skin with shallow eyes cover outstandingly colored flesh. With proper fertility and water, Blackberry can yield up to 10 tubers per hill. Yield potential is slightly higher than Purple Majesty and is earlier to harvest than All Blue. Skins are thin upon harvest; use care while harvesting and do not wash until you're ready to use them.
	Skin Color:	Deep Blue Purple	
	Flesh Color:	Violet	
	Flesh Texture:	Firm, Moist	

## Mid Season Potatoes \_ 70-90 days

Cal White		Organic	MID
	Days To Maturity:	80-90 Days	<p><b>Cal White is our organic substitute for Kennebec.</b> It will set an excellent yield of medium sized tubers faster than Kennebec. It's versatile in the kitchen for baking, boiling, dehydrating, mashing, salads, soups, etc.</p> <p><b>NOTE:</b> Conventional Kennebec available from another seed source.</p> <p><b>Grower Feedback:</b> John has made the switch from Kennebec to Cal White which is faster to mature &amp; just as prolific Kennebec while sharing the same culinary niche.</p>
	Skin Color:	Buff	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Chieftain		Organic	MID
	Days To Maturity:	80-90 Days	<p><b>LIMITED SUPPLY; ORDER EARLY!</b></p> <p>The eye-catching magenta skin will be the first thing you notice about this variety. Chieftain delivers a hearty set of uniform, round tubers on large plants. Chieftain is resistant to Scab, Tuber Net Necrosis and Late Blight. Once tubers are out of the ground, eating quality is versatile and tasty with good storage properties.</p> <p><b>Grower Feedback:</b> Chieftain does NOT like excessively wet, cold soils. Good bed prep with attention to drainage is very important with this variety.</p>
	Skin Color:	Pinkish Red	
	Flesh Color:	White	
	Flesh Texture:	Moist, Firm	

Ciklamen		Organic	MID
	Days To Maturity:	80-90 Days	<p><b>NEW VARIETY FOR 2024!</b></p> <p>Ciklamen works as both an early baby roaster or a regular mid-season storage variety. Expect excellent disease and viral resistance and a high tuber set from this European breed variety. Ciklamen tolerates mechanical handling better than some varieties. Storage and tuber dormancy is good at room temperature and even better in the cooler. Roast, boil or bake Ciklamen solo or as a mix.</p>
	Skin Color:	Red	
	Flesh Color:	White	
	Flesh Texture:	Firm, Waxy	

## *Mid Season Potatoes \_ 70-90 days*

Red Pontiac		Organic	MID
	Days To Maturity:	80-85 Days	<p>Red Pontiac is a tried and true producer in a wide variety of growing conditions. Plants are sturdy, tall and up-right, making hilling a bit easier.</p> <p><b>Grower Feedback:</b> Great yields! Tubers come off large and uniform. Many growers put Red Pontiac on their list of favored, reliable 'go-to' varieties.</p>
	Skin Color:	Red	
	Flesh Color:	White	
	Flesh Texture:	Waxy, Moist	

Russet Norkotah 278		Organic	MID
	Days To Maturity:	80-90 Days	<p>278 is one of Grand Teton Organic's selections out of Russet Norkotah stock. This variety will produce heavy yields of large tubers in a short amount of time. Large plants are more heat tolerant than other russets on the market. 278 stores moderately well; plan to use within 3 months of harvest.</p> <p><b>Grower Feedback:</b> Local growers appreciate how fast this russet matures so they can be out of the ground before they start cooking where they grow!</p>
	Skin Color:	Tan, Netted	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Russet Norkotah PHP		Organic	MID
	Days To Maturity:	80-90 Days	<p>A Grand Teton Organics' selection out of Russet Norkotah stock, this selection is the heaviest yielder of large tubers in a short amount of time. Good resistance to Scab. The PHP is part of the variety name to distinguish it from other Russet Norkotah selections; it does not indicate specific disease resistance.</p> <p><b>Grower Feedback:</b> Overall, a good performer with uniform, large tubers upon harvest. Delicious!</p>
	Skin Color:	Tan, Netted	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

## Mid Season Potatoes \_ 70-90 days

Yukon Gold		Organic	MID
	Days To Maturity:	80-90 Days	<p>This tried and true variety consistently performs well in the southeast. Yukon Gold will set approximately 5-7 tubers on medium-sized tall plants.</p> <p><b>Grower Feedback:</b> This really is a 'go-to' variety for its dependability. It is <b>important to get them out on time</b>. Tubers will begin to deteriorate and rot if left too long. Mark your calendar at planting and start checking your crop at 80 days so you can get them out of the ground before it gets too hot!</p>
	Skin Color:	Gold	
	Flesh Color:	Gold	
	Flesh Texture:	Waxy, Firm	

Grand Duke		Organic	MID
	Days To Maturity:	90 Days	<p>Grand Duke is back for 2024 for year three on the market. It is an attractive and versatile all purpose potato. The Duke will yield a bounty of attractive, smooth skinned tubers that can get quite large if left in the field. For harvest, mark your calendar to see how they're bulking up so you can control the tuber size.</p>
	Skin Color:	Gold	
	Flesh Color:	Gold	
	Flesh Texture:	Firm, Moist	

Purple Majesty		Organic	MID
	Days To Maturity:	90 Days	<p>Purple Majesty can set 8 tubers per plant and are great for early new potatoes or full-sized tubers later in the season. Additionally, purple potatoes contain Anthocyanidins which help to reduce cholesterol, improve immune function and reduce the risk of cancer and heart disease.</p> <p><b>Grower Feedback:</b> Use care when harvesting; skins are tender and will easily slip off if handled roughly. Kid gloves and egg hands, please.</p>
	Skin Color:	Purple/Blue	
	Flesh Color:	Purple	
	Flesh Texture:	Firm, Mid-Dry	

## *Late Season Potatoes \_ 90-110 days*

Baby Lou		Organic	LATE
	Days To Maturity:	90-100 Days	<p><b>BACK FOR 2024!</b>  <b>LIMITED SUPPLY; ORDER EARLY!</b></p> <p>Up to 40 per hill!! We can't wait to see how Baby Lou performs with this kind of potential output. This is another variety intended for baby or roaster mixes and bred to produce lots of uniform baby tubers from 1"-2" diameter. Baby Lou excels in the kitchen in soups, stews, crockpot recipes and for small roasting potatoes.</p>
	Skin Color:	Golden	
	Flesh Color:	Yellow	
	Flesh Texture:	Moist, Waxy	

Gold Nugget		Organic	LATE
	Days To Maturity:	90-100 Days	<p>Gold nugget is versatile, prolific and a good keeper. It produces up to 12 uniform tubers per plant. Harvest early for baby potatoes or leave in longer for a crop of medium sized storage tubers. Gold Nugget cooks evenly and its flavor is buttery. On the market table, the skin is very smooth and eyes are shallow making for a lovely display.</p>
	Skin Color:	Deep Gold	
	Flesh Color:	Bright Yellow	
	Flesh Texture:	Waxy, Moist	

Green Mountain		Organic	LATE
	Days To Maturity:	90-100 Days	<p><b>NEW VARIETY FOR 2024!</b></p> <p>This heirloom variety from the 1800's was bred in Vermont. Still a favorite for its all-purpose tubers and earthy flavor, Green Mountain is dry, mealy and great baked, boiled or mashed. Large spreading plants produce a healthy set in both number and size of tubers. This variety has good resistance to fusarium &amp; verticillium wilt; lower tolerance to virus and scab. Plant in acidic soil to curb instances of scab. Expect good storage.</p>
	Skin Color:	Buff	
	Flesh Color:	White	
	Flesh Texture:	Dry, Flourey	

## *Late Season Potatoes \_ 90-110 days*

Raspberry			LATE
	Days To Maturity:	90-100 Days	<b>LIMITED SUPPLY; ORDER EARLY!</b> Raspberry is still relatively new to the market. Expect this variety to yield 6-8 tubers on small-medium sized plants. Its color is vibrant and eye-catching for market displays. Smooth skin, shallow eyes and vivid flesh color make it stand out roasted or in potato salad. Raspberry keeps well in storage.
	Skin Color:	Burgundy	
	Flesh Color:	Raspberry	
	Flesh Texture:	Waxy, Moist	

Terra Rosa		Organic	LATE
	Days To Maturity:	90-100 Days	Terra Rosa will produce a hearty yield of appealing oblong tubers that can reach up to 10 oz. Smooth skin, shallow eyes and exceptional eye-catching color make this variety an asset on the market table. Terra Rosa's rich color reflects its high levels of immune system-boosting antioxidants and carotenoids. <b>Grower Feedback:</b> Terra Rosa performed well for growers in NC with several accounts of 1:16 yields.
	Skin Color:	Magenta	
	Flesh Color:	Dark Pink	
	Flesh Texture:	Mid-Dry, Firm	

Wild Purple		Organic	LATE
	Days To Maturity:	90-100 Days	Aptly named, wild purple resembles some of the wild varieties found in the South American Andes. The vines can get up to 30", are semi-upright and narrower than other cultivated varieties. Plants produce 2 different kinds of tubers on the same plant; purple skin with purple flesh and mottled purple & gold skin with streaked gold and purple flesh. So, are you feeling wild?...
	Skin Color:	Purple OR Purple & Gold	
	Flesh Color:	Purple OR Purple & Gold	
	Flesh Texture:	Firm, Moist	

## *Late Season Potatoes \_ 90-110 days*

Yellow Finn		Organic	LATE
	Days To Maturity:	90-100 Days	Yellow Finn produces a good yield of slightly flattened to round potatoes. Its flavor is buttery and sweet and is favored for mashed, creamed, fried and baked potatoes. These taters tend to set far from the seed piece, so use a light hand in harvesting until you know where to look to avoid skewering these lovelies. Yellow Finn holds well in storage.
	Skin Color:	Gold	
	Flesh Color:	Yellow	
	Flesh Texture:	Moist, Mealy	

All Blue		Organic	LATE
	Days To Maturity:	100-110 Days	All Blue has delighted eaters everywhere for over 100 years. This variety takes the full season to make large tubers; you can take them earlier as new potatoes if you just can't wait. High in antioxidants. <b>Grower Feedback:</b> Due to All Blue being a late-maturing variety, performance will be highly season & site-specific. Ensure adequate watering if summer heats us and dries out to stress related physiological conditions like hollow heart.
	Skin Color:	Blue/Purple	
	Flesh Color:	Blue	
	Flesh Texture:	Soft, Moist	

German Butterball		Organic	LATE
	Days To Maturity:	100-110 Days	Tater enthusiasts everywhere agree that you can't find a better all-around potato than German Butterball. German Butterball requires a long season produce a good set of up to 12 tubers per plant on large, upright plants. A good keeper, Butterball will last for months in storage. <b>Grower Feedback:</b> Overwhelmingly, growers LOVE this variety. Many reported yields of over 1:10, some reached 1:14! <b>Quote:</b> "German Butterball is the BEST TASTING fried tater EVER!"
	Skin Color:	Gold, Netted	
	Flesh Color:	Yellow	
	Flesh Texture:	Medium-Dry	

## Late Season Potatoes & Fingerlings

Russet Burbank		Organic	LATE
	Days To Maturity:	100-110 Days	America's favorite potato pound for pound is the Russet Burbank. Grown since the late 1800's, this variety will produce a hearty set of large tubers on large, upright plants. Give them at least 16" between seed pieces for best performance. <b>Grower Feedback:</b> Burbank requires a long season. Ensure adequate fertility and water so plants yield their best.
	Skin Color:	Russet	
	Flesh Color:	White	
	Flesh Texture:	Dry, Floury	

Magic Myrna		Organic	LATE
	Days To Maturity:	90 Days	<b>NEW FOR 2024!</b> <b>LIMITED SUPPLY; ORDER EARLY!</b> Magic Myrna is an Alaskan breed variety prized for its earliness and unique tuber coloration which varies widely, even on tubers from the same plant. Some will be all red, all yellow or mottled and both colors! Lovely for market table displays solo or as part of a mix. Expect a heavy set from these plants. Tubers have relatively shorter storage, so boil, steam, sauté or roast 'em up sooner than later!
	Skin Color:	Red &/or Gold	
	Flesh Color:	Yellow	
	Flesh Texture:	Waxy, Firm	

Amarosa Fingerling		Organic	LATE
	Days To Maturity:	110+ Days	<b>BACK FOR 2024!</b> Amarosa's been off the menu since 2020 and has returned! As one of the only red-skinned, red-fleshed fingerlings on the market, Amarosa is an eye catcher on the market table. Production potential for up to 30 tubers per hill is possible if fertility and water requirements are met. Upon cooking, Amarosa will hold its color for the prettiest nutrient-dense roasted or mashed taters you can find!
	Skin Color:	Red	
	Flesh Color:	Reddish Pink	
	Flesh Texture:	Waxy, Smooth	

# Fingerlings

Austrian Crescent		Organic	LATE
	Days To Maturity:	110+ Days	Austrian Crescent tends to set a prolific number of crescent shaped 3-7 oz tubers that can reach up to 10" long. Plants will get large and tend to sprawl, so hill early several times then let the vines go where they may. Tubers are great for roasting, salads or steaming and they'll keep well in storage for your favorite fall recipes after the heat of summer has past.
	Skin Color:	Gold-Tan	
	Flesh Color:	Yellow	
	Flesh Texture:	Waxy, Firm	

Banana		Organic	LATE
	Days To Maturity:	110+ Days	Banana fingerlings are another stellar producer of up to 40 tubers per hill if given proper space, fertility, water and time. Space fingerlings at a minimum of 12"-16" apart. Banana fingerlings will be 2"-3" in length on medium-large sized plants. Start checking early because some may be ready to harvest at 80-90 days.
	Skin Color:	Gold	
	Flesh Color:	Yellow	
	Flesh Texture:	Waxy, Mid-Dry	

French		Organic	LATE
	Days To Maturity:	110+ Days	French Fingerling is outstanding in just about every way. With the potential to set up to 40 tubers per hill and tuber size more in line with standard potato varieties, French Fingerling will meet and exceed your expectations if you can provide them with adequate fertility, water and enough time in the ground to work their magic. Set seed pieces at least 16" apart, hill several times early and then let the vines go wild.
	Skin Color:	Dark Rose Red	
	Flesh Color:	Yellow with Pink Streaks	
	Flesh Texture:	Waxy, Firm	

# Fingerlings

La Ratte			LATE
	Days To Maturity:	110+ Days	<b>NEW FOR 2024!</b> This French variety is prized for its prolific set of exceptionally flavored tubers. Some find them to have a nutty flavor similar to chestnuts or hazelnuts. Medium sized plants are resistant to scab and viruses. Check plants at 90 days as they may be ready to harvest sooner. La Ratte stores well into the colder months for all of your favorite fall and winter recipes.
	Skin Color:	Buff Gold	
	Flesh Color:	Yellow	
	Flesh Texture:	Waxy, Firm	

**The man behind the tater... Thanks to John Hoggan!**  
 Owner & Grower of Grand Teton Organics, Idaho

## *Ordering Seed Potatoes from*

### **ORDERING:**

We will accept orders from **Monday, November 6<sup>th</sup> 2023 to Sunday, January 14<sup>th</sup>, 2024.**

We require a \$25.00 deposit per 50 pounds of potatoes ordered.

**No deposit is required for orders of less than 50 pounds total.**

The ORDER FORM is in a separate PDF file, located on the Seed Potato Page of our website; please use the Order Form for pricing and additional details.

### **You can place your order in any of these ways:**

- E-mail us! [info@chathamfarmsupply.com](mailto:info@chathamfarmsupply.com)
- Call us! **(919) 542-3353**
- Fax us! **(919) 542-6717**
- Mail it to...

**Country Farm & Home Supply  
203 S. Small Street  
Pittsboro NC 27312**

### **Arrival of Seed Potatoes:**

We will schedule the delivery of all seed potatoes around Valentine's Day of February 2024. We will communicate the exact delivery date via our NEWSLETTER and E-MAIL. We will let everyone know when they are here, sorted and ready for pick-up via E-MAIL. Stay tuned for up to the minute details as weather can be inclement in February.

### **Pick-Up & Delivery Options:**

Once we announce that everything is here, come on down!!

**Our store hours are: Monday-Friday, 8 – 5:30 pm and Saturdays 8 – 3 pm.**  
We will be running multiple delivery routes immediately after our seed potatoes arrive. Check out our website for more details about our farm delivery service or to complete our survey about adding delivery services to your area.

# Seasonal Planning & Seed Calculations

What are your priorities for your 2024 Potato Crop?

Use the **Variety Guide** located in the centerfold page to help you figure out which varieties will meet your needs. Each column in the Variety Guide addresses a different priority; what's most important to you?

## Planting Calculations

*How many **pounds** of seed do you need?*

		Row Length		
	Seed Spacing	25'	50'	100'
Standard Potatoes	8"	5#	10#	20#
	10"	4#	8#	15#
	12"	3#	6#	12#
Fingerlings	12"	3#	6#	12#
	16"	2.5#	5#	10#
	18"	2#	4#	8#

**Assumptions:** 1 Row to the Bed

Seed piece weight = **2 ounces**

**Generalities:** Seed potato size varies greatly between varieties

Fingerling seed pieces tend to under 2 ounces

### Tater Tendancies:

**Closer spacing** = smaller taters

*(for roasters & early market sales)*

**Wider spacing** = larger taters

*(for storage & mid-late season market sales)*

**NOTES:** Crunch those numbers!

---

# **DELIVERY GUIDE**

## **Country Farm & Home Delivers!**

We love seeing you here at the store, but also love coming to you! We recently got a box truck and that has allowed us to expand our delivery services from 2 routes to 8 and we're expanding this service based on customer demand. The logistics of running delivery routes generates a list of questions. Here's what you can expect from us when you participate in our delivery services.

**Visit the DELIVERIES page on our website:**

<https://chathamfarmsupply.com/resources/country-farm-and-home-delivers>

### **Getting on a delivery route:**

Follow the link above to the “**Deliveries**” page of our website. Details about our current service areas are listed on the website. Additionally, if you live in an area that is not being currently served or you're not sure if we are coming your way, there is a survey at the bottom of the page that is helping us assess demand. Take a moment to fill that out and we'll let you know if we can serve you.

Once you've filled out our survey and we know who you are, where you are, what you need and the frequency of your needs, we add you to your route's email list. When we are planning our routes, we send out an email to each list to gather orders. If you need anything, respond to that email. If you're all set, no need to respond. Each route runs on a different schedule of frequency. All these details are on the website, link above.

### **Requirements for single site stops or mutual group stops:**

Each route has its own requirements if you'd like us to stop at your site. If you don't meet those requirements, we have built in mutual group stops in most routes so folks who are not ordering enough for us to stop at their site can still get on our truck and meet us somewhere to pick up. For these details and requirements, click on your route from the main “**Delivery**” page on the website, link above.

### **How to order:**

You may either respond to our group emails for your route when we're collecting orders or email your list at any time to [melinda@cfhsupply.com](mailto:melinda@cfhsupply.com) to get on the next scheduled delivery to your area. We will respond within 24 hours to confirm receipt of your order.

# DELIVERY GUIDE

Country Farm & Home Delivers!

## Adding on to seasonal crop orders:

For seasonal orders like seed potatoes, sweet potato slips, alliums and strawberry plugs, add on requests are accepted up to a week before we plan our routes to distribute these crops. You will receive an email reminder if you are on an established route asking for add-ons before we come your way.

## Confirmation of delivery date and time:

You will receive an order confirmation once the order period has closed for a delivery cycle. This will also give you an estimated time of delivery on the delivery date. We ask that you check over this order for accuracy before the delivery date.

## How to pay:

We prefer check or cash payment upon delivery. If you prefer to pay by credit card, you can call payment into the store after you receive your official order confirmation. For routine customers, we also now have the ability to coordinate payment through an ACH bank draft. Email [melinda@cfhsupply.com](mailto:melinda@cfhsupply.com) if you are interested in more details about ACH payments.
